

IN THE CLAIMS:

Please cancel claims 1-4 and the following new claim 5:

1. (Canceled)

2. (Canceled)

3. (Canceled)

4. (Canceled)

5. (New) A water-proof structure of a pull rod of the cabin cap comprising:

a pull rod main body comprising a pivoting pull rod,

a pivot seat, wherein said pivot seat is pivotally connected to said pull rod at one end, and further includes a threaded portion extending from said first end,

said pivot seat includes a first annular groove for receiving a first water proof ring and a second annular groove for receiving a second water proof ring,

said pivot seat further includes a recess for receiving a third water proof ring, wherein said recess is dimensioned and configured to hold said third water proof ring on an outer surface of said pivot seat,

a positioning seat comprising an opening for receiving said threaded portion therein, said positioning seat further comprising a column wherein said first and second water proof rings are tightly positioned against an inner wall of said column, and a circular protrusion extending from an upper surface of said column, wherein said third water proof ring is tightly positioned on top of said circular protrusion providing additional water-proofing means.
